

Approval of access to industrial and commercial energy storage solutions

Overview

Energy storage offers a range of opportunities for standalone developers, generators, network operators and consumers (ranging from large energy users through to domestic consumers) and other electricity sector participants. Storage is an increasing focus due to the range of benefits. Energy storage may be used in a range of project types, including standalone, co-located, and behind-the-meter projects. Energy storage is not new – the scale of pumped hydro deployment across the globe is significant. The new technologies, however, are. Our review demonstrates that no jurisdiction currently provides a comprehensive regulatory framework for energy storage, with the majority of jurisdictions currently. As set out above, there are a wide variety of energy storage technologies and applications available. As a result there are a number of legal issues to consider, although the relative importance of such issues will be informed by the specific energy storage.
