

Do energy storage battery factories consume a lot of electricity

Overview

With the current state of product and production technology, the electricity demand of all battery factories planned worldwide in 2040 will be 130,000 GWh per year, equivalent to the current electricity consumption of Norway or Sweden - this is the conclusion of a study by the research team led by Dr. Florian Degen of the Fraunhofer Research Institution for Battery Cell Production FFB, the MEET of the University of Münster, the Helmholtz Institute Münster and the University of Münster.
